

Create a Web application called "Document Locker" where users can securely upload, store, and manage their documents. The application should implement basic CRUD (Create, Read, Update, Delete) operations, user authentication, and permissions to ensure that only authorized users can access the documents.

**Requirements:**

1. **User Authentication:**
  - a. Implement user registration, login, and logout functionalities.
  - b. Use built-in authentication system to manage users.
  - c. Ensure that each user can only see and manage their own documents
2. Provide the complete project, including the database
3. Ensure that the UI is user-friendly
